

Starship Rules

Savage Space Bastards v0.2

This section of the rules outlines how this campaign will treat starships and starship combat.

Space Ships as Savage Worlds Characters

Attributes represent the overall strengths and weaknesses of your ship. Each ship is different. Once chosen attributes are unlikely to be raised during the game as it is expensive. All Attributes have similar values to character stats. This means that you can not compare a ship one to one to another vehicle or a player character.

There is no wild die used in starship actions. To make ship-bound checks, PCs must be at an appropriate command station, either Piloting, Engineering, Gunnery, or Sciences. PCs may roll the appropriate ship's skill for the task (i.e. Pilot, Repair, Astrogation, Shooting, Astronautics, Ship Ops, or Knowledge) rolling the character's skill die instead of the wild die. If a PC is not directing the action, then only the ship die is rolled without the PC's skill die.

Combat Turns in Space

All PC-manned ships must have a map. This campaign will encourage ship-to-ship boarding actions, and so it is imperative that each vessel have a map of some sort to denote where each command station is and where invaders might assault the ship. For each round of combat, player characters take a normal round as they normally would moving about their starship as they see fit. They may spend their actions as they would in normal combat, working at command stations and/or fighting off boarding parties.

- All PCs and NPCs on a ship may draw a card.
- These PCs and NPCs may act within their ship(s) using their actions.
- They may spend their action to use a command station if they end their movement at one. The command stations are:
 - Piloting - Gold
 - Engineering - Blue
 - Gunnery - Red
 - Sciences - Green
- Once all PCs have taken a turn, then each ship is dealt cards. At that point, all ship checks and actions are resolved on their card

There are four range bands: Sensor, Intercept, Engagement, and Close. Different ship's weapons and defenses are more effective at one range than another.

Ship Attributes

The attributes of a ship translate into subtly different specifications than player characters, but the rules are the same.

Size

A new attribute for a ship, this is chosen at the time the vessel is created and can never change. It reflects the amount of command space on the vessel as well as how many slots and crew it can accommodate. Size is abstract and all ships created here count as large in creature size terms. Capital ships are not covered by these rules.

Size	Deck Area (map in square inches)	Slots	Wounds	Base Agility	Notes
Shuttle / Fighter / Grav Vehicle	4"		2	D8	Space Car Max Spirit = D8 Max Vigor = D8
Transport / Grav Tank	15" (3"x5" index card)		3	D6	Space Van Max Spirit = D10 Max Vigor = D10
Courier / Cutter	24" (6"x4" index card)		4	D4	Space Truck
Freighter / Scout	40" (half sheet of paper)		5	D4	Can carry Shuttles
Escort / Patrol	80" (sheet of paper)		6	D4	Can carry Shuttles & Transports
Frigate / Corvette	160" (two sheets of paper)		7	D4	Can carry Shuttles & Transports
Destroyer	320" (four sheets of paper)		8	D4-2	Can carry Shuttles & Transports

Agility

This attribute represents the reaction time, maneuvering capabilities in combat and amount of jumps a ship can perform before it needs to refuel. Smaller ships start with a higher Agility, and larger sized vessels are penalized with respect to their agility to start.

Agility	Acceleration / Top Speed	Roll to Hit	Max Roll to Hit	Max Engine Power
D4	2 / 6	4	8	2
D6	3 / 9	5	9	3
D8	4 / 12	6	10	4
D10	5 / 15	7	11	5
D12	6 / 18	8	12	6

Smarts

How good the installed computers and sensors are is represented by the ship's Smarts score. This skill is used for checks for sensors against stealthy ships, or for electronic warfare to enhance weapon targeting solutions, or any deception that a ship's captain may attempt. The Smarts on a ship also determines how quickly a jump solution is able to be built, allowing the ship to slip into hyperspace. It does not necessarily mean that the computers are more advanced, it might just be that the positronic brain of the ship has learned a few tricks. The better the overall systems are the less human input is needed.

Smarts	Max Electronic Warfare Power	FTL solution Required for Jump	Max Scan Power
D4	0	28	1
D6	1	24	2
D8	2	20	3
D10	3	16	4
D12	4	12	5

Spirit

How much energy can be pulled from the ship's power plant? Whether the ship runs on an ion furnace, a dark matter battery, or a fusion reactor this attribute reflects the amount of power that can be drawn each turn for maneuvering the ship, firing weapons, powering shields, repair, and electronic warfare each round. Ships also have a backup battery that allows them to store power for an emergency. The more Spirit a ship has, the more resources it can draw on.

Spirit	Power Generated	Battery Size
D4	2	4
D6	3	6
D8	4	8
D10	5	10
D12	6	12

Strength

This score is used to determine the damage of weapons and the puissance of any shields. Furthermore, strength is appropriate for determining the efficacy of any application of the power core such as a tractor beam or electromagnetic pulse.

Strength	Max Shield Power	Max Weapon Power
D4	1	2
D6	2	3
D8	3	4
D10	4	5
D12	5	6

Vigor

Resilience and toughness of a ship are not simply a matter of thicker plating. It is also important to keep your ship well maintained and in good repair. Some ships have malfunctions all the time, others are a breeze to repair thanks to redundant systems and easily accessible machines. Toughness is the same as for characters but a ship always counts as having heavy armor. Wounds are the same as for a PC. A ship never suffers Fatigue. Vigor is very important as it is a factor in all repair rolls done on the vessel.

Vigor	Toughness	Max Repair Power
D4	4	1
D6	5	2
D8	6	3
D10	7	4
D12	8	5

Ship Skills

In general the ships' skills represent the abilities of the ship's computer to do a job, the appearance or installed systems. These systems need to be paid for just like abilities. Basic functionality is already represented by the attributes which contain everything needed to fly. A ship does not need to have a single skill to be functional. However skills represent a specialization of the ship. During play usually the equivalent skill of a player character is used instead of the ship's own. However, a ship gives a bonus to the character's dice roll depending on the ship's skill rank.

Astrogation (Smarts)

Astrogation is the knowledge of FTL travel through Space. It is required to plot the quickest and safest route through the void and is a must have for every navigator. This skill represents the ship's intergalactic maps and navigation software.

Notice (Smarts)

This skill stands for the installed scanning devices, radars and other detectors. If the player is on board his skill is used. The ship can assist as usual. If no player is present the ship uses this skill to automatically detect danger.

Piloting (Agility)

This skill represents the state of the vessel's piloting software and controls.

Shooting (Smarts)

The shooting skill represents the targeting computer of the ship. If no player is available to man the weapons the ship's skill is used with no wild die.

Stealth (Agility)

This represents the ability of the ship to stay undetected. If a player character wants to hide his ship he will roll piloting while the ship will assist with stealth. If there is no pilot the stealth skill of the ship is used to determine whether an observer detects it. This skill represents not only a computer program but also energy emissions, stealth coating, hull form etc.

This roll is modified by how close the sensing ship is, whether systems on the ship are shut off or not, and how fast the ship is moving. Power can be directed to sensors to increase the effect allowing it to find or target a hidden ship.

Ship Equipment

Cargo Hold: Enough space on a ship to make a moderate (cred-earning) shipment. A cargo hold is evident when the ship is boarded, and no special precautions are taken to hide its contents.

Crew Quarters: You can sleep anywhere, but crew quarters are actually meant for it. Crew quarters afford privacy and comfort in a domain where such things are luxuries. Also you don't have to share, and you know the first mate snores.

Landing Bay: Airlocks, bay-doors, and take-off ramps to accommodate shuttles and single-pilot small fighter craft.

Smuggling Compartments: Like a cargo hold, (can carry a small shipment) but it won't show up on routine scans or visual inspections of the ship. This hidden compartment has life support for smuggling people too.

Cloaking Device: Doesn't necessarily render the ship invisible to the eye, but masks the heat and electrical signature of the ship, making it very hard to detect or identify. Super illegal.

Jump Drive: The FTL drive that can be used to travel from

Tractor Beam: Creates a large gravitic field extending ship to ship. Can be used to grapple or tow another ship. Temperamental and dangerous. Guild prototype. Not legal.

Fake Transponder: Usable remotely, this system can broadcast a different ship's signal or play a powerful recording (or act as a beacon) on command.

Long Range Scanner: Provides broad EM spectrum and gravimetric readings, giving the crew advance warning up to a dozen light-minutes away.

Quantum Encryptor: Applies encryption to communications and data storage. Grants special armor against interception of digital communications. Data on the ship is in a secure state until unlocked.

Grappler: Officially for latching onto asteroids and netting cargo, it's an array of nets or grapples that can link two vessels. Legal.

Mining Drill: High power energy drill. Vaporizes rock. Vicious close range weapons easily modified to bore through hulls. Legal.

Particle cannons: Pew! Pew! Often cross linked. Not legal without a license.

Missiles: Projectile with mounted drive. Not legal.

Plasma Cannon: Capital weapon. One shot only until repaired/recharged on ships smaller than dreadnoughts. May fry systems. Deadly. Super not legal.

Ship Operations

Player characters may make contributions to a space battle by manning a command station. The command stations are designated on the ship map by a certain color.

Piloting - Gold

Even the smallest of ships has a piloting command station. This allows the pilot to drive the ship, maneuvering for defense and superiority. A player character who ends their turn at a piloting command station can do one or more of the following things, assuming they pay the multi-action penalty.

- Evasive Action
 - Spend a point of power and make a Piloting roll, using that result as the target number for opponents to hit the ship up to the maximum roll to hit value
 - Spend power to add points 1:1 to this result
- Pursue / Disengage
 - Make an opposed Piloting roll to close or flee from another vessel
 - If the other vessel doesn't oppose, this is automatically successful
 - Success allows the winner to either increase or decrease the range zone
 - Spend power to add points 1:1 to this result
- Boarding Action
 - Make an opposed Piloting roll to come and board a ship in the close range zone
 - In the case where there is no opposition, such as in the case the opposing ship is shaken or is unable to maneuver, a simple success is all that is needed
 - Spend power to add points 1:1 to this result
- Gain Superiority
 - Spend a point of power and make a Piloting roll, adding +1 to hit for all weapon attacks for success and each raise
 - Spend additional power to add points 1:1 to the result of this roll
- Special Maneuvers (Crazy Ivan, Club Hauling, Rope a Dope)
 - Spend a point of power and make a Piloting roll

Engineering - Blue

Larger ships include at least one engineering command station. A player character at this station may choose to reallocate the power generated by the ship's power plant(s) which allow PCs at other command stations to boost the effectiveness of the ship. A player character who ends their turn at an engineering command station can do one or more of the following things, assuming they pay the multi-action penalty.

- **Reallocate Power**
 - As a free action, a player character at an engineering command station may reallocate power as they see fit with a successful Astronautics check
- **Boost Power Output**
 - An engineer may try to coax more power from the ship as an action with a successful Astronautics check
 - An extra point of power is generated for success and each raise, up to the amount the Spirit of the ship generates normally
 - A natural one on this roll indicates harm to the reactor
- **Emergency Repair**
 - Spend a point of power and make a Repair check to attempt emergency repair
 - Depending on the subsystem, damage may be fixed after four successes and raises
 - Spend additional power to add points 1:1 to the result of this roll

Gunnery - Red

The gunnery command station is used to operate the ship's main weapon, either overloading or configuring particular attacks. Unlike other duty stations, the gunnery station allows a player character using it to do all these choices on the menu below as long as they all are for the same attack. Multiple attacks may be done at the regular multi-action penalty.

- **Fire Starship Weapon**
 - Spend a point of power and make a Shooting check to fire a powered weapon
 - Spend additional power to add points 1:1 to the result of this "to-hit" roll
- **Overload Starship Weapon**
 - Spend a point of power and make a Shooting check to fire a powered weapon
 - Spend additional power to add points 1:4 to the damage of this weapon
- **Narrow Salvo**
 - Spend a point of power and make a Shooting check to fire a powered weapon
 - The attack is at -4 to hit, but +4 to damage
- **Full Spread**
 - Spend a point of power and make a Shooting check to fire a powered weapon
 - The attack is at +2 to hit, but -4 to damage
- **Point Defense**
 - Make a Shooting check to fire a weapon to shoot down an incoming torpedo
 - Torpedoes typically require a six (6) to be destroyed

Sciences - Green

The ship's science command station is used to perform a variety of actions. Not just sending out an active scan or pulling in a set of passive sensor readings, but also managing the ship's shields, fighting through electronic warfare, or plotting a jump to FTL.

- Scan
 - Spend a point of power and make a Ship Ops roll to look for hidden or invisible ships or phenomenon in nearby space
 - Spend additional power to add points 1:1 to the result of this roll
- Sensor
 - Make a Ship Ops roll at -4 to look for hidden or invisible ships or phenomenon in nearby space
- Research Probe
 - Spend a point of power and make a Ship Ops roll to launch a research probe at something to learn more about what it is
- Reinforce Shields
 - Spend a point of power Spend a point of power and make a Ship Ops roll to raise shields by one point for each success or raise up to the shield's maximum value
- Electronic Warfare
 - Spend a point of power and make a Ship Ops roll, adding +1 to hit for all weapon attacks for success and each raise up to the maximum EW value
 - Spend additional power to add points 1:1 to the result of this roll
- Astrogation / FTL
 - Spend a point of power and make an Astrogation roll to build an FTL solution up by one point for success and each raise
 - Spend additional power to add points to the FTL solution 1:1

Player Characters' Starting Ship

There are three different ships to choose from:

Skipjack: This freighter has seen some miles, but with a loving engineer and some illegal modifications, it's become a fast little ship that's equipped to get places it's not supposed to and carry things it shouldn't. It is a favorite of Illicit merchants, smugglers, and blockade runners who are looking to do odd jobs, small thefts, and find lost items.

Size: Freighter Agility: D8 Smarts: D6 Equipment: Jump Drive	Spirit:D6 Strength: D4 Vigor: D8 Choose one: Cargo Hold, Smuggling Compartments
---	--

Cerberus: The Cerberus was once a well-armed patrol craft. While it's been repurposed in its new life, it still has the sleek lines, limited crew, and cargo space of a predator. This ship is a favorite of bounty Hunters and extraction specialists looking to find missing people or items, and claim prizes on those criminals the powers that be consider important or dangerous enough.

Size: Cutter Agility: D6 Smarts: D8 Equipment: Jump Drive	Spirit:D6 Strength: D8 Vigor: D4 Choose one: Long Range Scanner, Grappler
--	--

Firebase: The Firebase is a corvette, and thus a larger ship that can carry a fair-sized crew into trouble and back. It is the choice of rebels and criminals, hunted by the law but often beloved by the citizenry. These bastards are looking to do jobs that free the oppressed, protect the downtrodden, and struggle against the iron fist of the Space Cops and the Science Patrol.

Size: Corvette Agility: D4 Smarts: D6 Equipment: Jump Drive	Spirit:D8 Strength: D6 Vigor: D8 Choose one: Fake Transponder, Crew Quarters
